LECTURE 6

♥ ARRAYS

LAST LECTURE

Assignment Project Exam Help

https://tutorcs.com

WeChat: cstutorcs

ON MONDAY...

- Talked about good style/bad style
- Functions what/how/why?

THIS LECTURE:

Assignment Project Exam Help

https://tutorcs.com/AY...

WeChat: cstutorcs Hopefully have some air con

- Look back at some functions
- Starting to look at arrays
 - MAYBE strings if we are doing good time:)

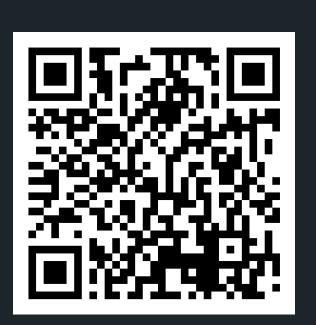

66

WHERE IS THE CODE?

Assignment Project Exam Help

https://tutorcs.com

WeChat: cstutorcs

Live lecture code can be found here:

HTTPS://CGI.CSE.UNSW.EDU.AU/~CS1511/23T1/LIVE/WEEK03/

FUNCTIONS RECAP

 A function is a block of statements that performs a specific task

WHAT?

Assignment Project Exam Help

https://tutorcs.com

WeChat: cstutorcs

FUNCTIONS RECAP

WHY?

- Improve readability of the code
- Improve reusability of the code
- Debugging is easier (you can narrow down which function is causing issues)
- Reduces size of code (you can reuse the assignment Project Exam Help

https://tutores.com/ https://tutores.com/ https://tutores.com/ peded/ https://tutores.com/ https://tutores.com/ peded/ https://tutores.com/ https://tutores.com/ peded/ https://tutores.com/ peded/ https://tutores.com/ peded/ https://tutores.com/ https://tutores.com/ peded/ https://tutores.com/ https://t

WeChat: cstutorcs

FUNCTIONS RECAP

HOW?

- Predefined standard library functions (builtin)
 - printf(), scanf() inside stdio.h
- User defined function with syntax:

```
Assignment Ptoject Examption name (arguments (type name)) {
    BLOCK OF CODE (Set of instructions for the https://tutorcs.com function)
    WeChat: cstutorcs
```

- return_type can be any data type such as int, double, char, etc (CAN'T BE ARRAY)
- function_name whatever your heart desires,
 should be descriptive
- arguments what are the inputs into the function
- Block of Code set of instructions exercuted when call is made to the function

RECAP FUNCTIONS

A function,
which adds two
numbers
together and
returns the
result

return type:

What type does this function return?

name of function:

What will I name my function?

input/ arguments:

What am I giving my function?

```
Assignment Project Exam Help
```

https://tutores.com

```
iWeCladdsu(oimst number_one, int number_two) {
   int sum;
   sum = number_one + number_two;
   return sum;
```

To finish I return an int (sum), which is what I said I would return when I wrote my function

RECAP **FUNCTIONS**

PROTOTYPE

 You must have a prototype above your main to let everyone know the function is defined and is coming!

Assignment Project Exam Help

WeChat: cstutorcs

REVISITING MEMORY

stack heap global/static variable code

- Our C file is stored on the hard drive
- Our Compiler compiles the code into another file that the computer can read
- When we execute code, the CPU will actually process the instructions and perform basic arithmetic, but the import Project Exemples of all the data readed in the continuous section.
- - Ne Reading tand writing to variables will change the numbers in RAM
 - Memory is divided into the stack and the heap
 - The stack is an ordered stack and the heap is a random free for all - insert something where you can find space for it.

REVISITING MEMORY

stack heap global/static variable code

- Stack memory is where relevant information about your program goes:
 - which functions are called,
 - what variables you created,
- Once your block of code finishes running {}, the stack (it's alive!)
 Once your block of code finishes running {}, the stack (it's alive!)
 - It means at compile time we can allocate stack memory space (not at run time)
 - The stack is controlled by the program NOT BY THE developer
 - The heap is controlled by the developer (more on this in a few weeks) and can be changed at run time

MEMORY IS IMPORTANT WITHOUT MEMORY, WE CAN'T REALLY RUN ANYTHING

- Think of your own memory and what it allows you to do.
- Computer memory is important to consider when you are writing your code (we don't focus on this in 1511, but you will in later courses)
 - weching gets... you will learn all about this in later computing courses! In 1511 we don't mind the wastage:)

HOW DO WE EFFICIENTLY SOLVE PROBLEMS?

DIFFERENT
PROBLEMS HAVE
DIFFERENT
OPTIMUM
SOLUTIONS

- In this course we will learn about two pretty cool data structures:
 - Arrays (NOW!)
 - Linked Lists (after flexibility week)
- There are of course other data structures that https://www.ill_learn about in further computing courses wechoosing the right structure to house our data depends on what the problem is and what you
 - are trying to achieve. Some structures lend themselves better to certain types of problems.

SO WITHOUT FURTHER ADO

THE ARRAY

- A PRETTY IMPORTANT DATA TYPE!
- A collection of variables all of the same type
 - Think about how this is very different to a struct
- We want to be able to deal with this collection as

https://whole.entity, where we can:

WeChae caccess any variable in this collection easily

Change any variable in this collection easily

SO WHAT KINDS OF PROBLEMS DO ARRAYS SOLVE?

NOTICE THAT EACH OF THESE COLLECTIONS HAS THE SAME TYPE OF VARIABLE I AM RECORDING

- Let's say I want to record the daily ice cream consumption for a week
- What about the daily temperatures for a year?
- The amount of time daily that I spend walking my

dogs? Assignment Project Exam Help

https://tutorcs.com

WeChat: cstutorcs

Can you think of other examples?

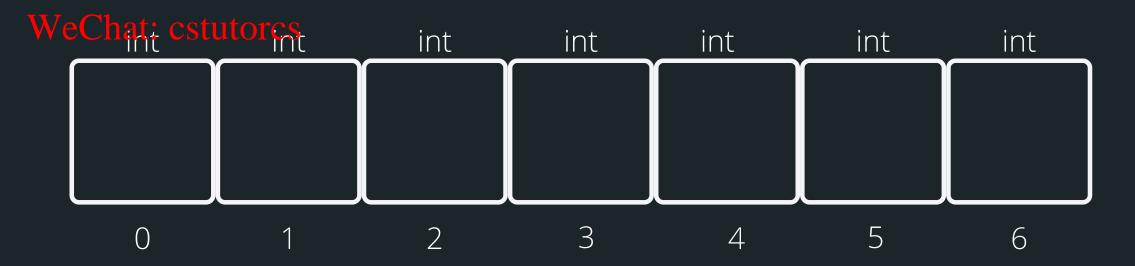

ARRAY (VISUALLY)

NOTE: ALL ELEMENTS OF AN ARRAY MUST BE OF THE SAME DATA TYPE (HOMOGENOUS)

- If we group our data type as a collection, for example a collection of integers:
- We can access them as a group(collection)
- We can loop through and access each individual

element of that collection essignment Project Exam Help

https://tutorcs.com

this array holds 7 integers

You can access elements of an array by referring to their index

WHY DO WE NEED AN ARRAY?

LET'S LOOK AT AN EXAMPLE PROBLEM

 Let's say I am tracking my ice cream consumption over a week (without arrays)

```
int mon = 2;
 int tues = 3;
 int wedn = 3;
griment Project Exam Help
https://tutorcs.com 7;
Wechat: sautores 1;
 int sun = 3;
 // Any day with 3 or more scoops is too
 much!
 if (mon >= 3){
     printf("Too much ice cream\n");
 }
 if (tue >= 3) {.....
```

WHY DO WE NEED AN ARRAY?

LET'S LOOK AT AN EXAMPLE PROBLEM

- What if I am tracking this over the month or over a year?
 - Will I need 30 variables/365 variables?

Assignment Project Exam Help

https://tutorcs.com

WeChat: cstutorcs

THIS IS A GREAT PLACE TO USE AN ARRAY...

HOW DO WE DECLARE AN ARRAY

```
Type of data
                 Name of the
                                Number of items
stored in array
                                  in the array
                    array
    1. Declaring an array
 int ice cream consum[7];
    that: cstutorcs
2. Declaring and Initialise the array
    Note that once you declare an array,
 // you can't initialise it in this way
 int ice_cream_consum[7] = {3, 2, 1, ...};
```

To initialise, open curly bracket and separate values by comma. If you have empty {}, it means to intialise the whole array to 0

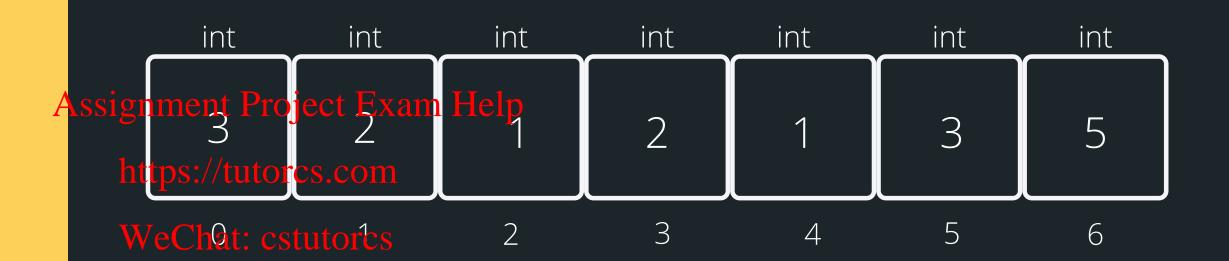

ARRAY (VISUALLY)

DECLARING AND INITIALISING AN ARRAY

So let's say we have this declared and initialised:

```
int ice_cream_consum[7] = {3, 2, 1, 2, 1, 3, 5};
```

This is what it looks like visually:

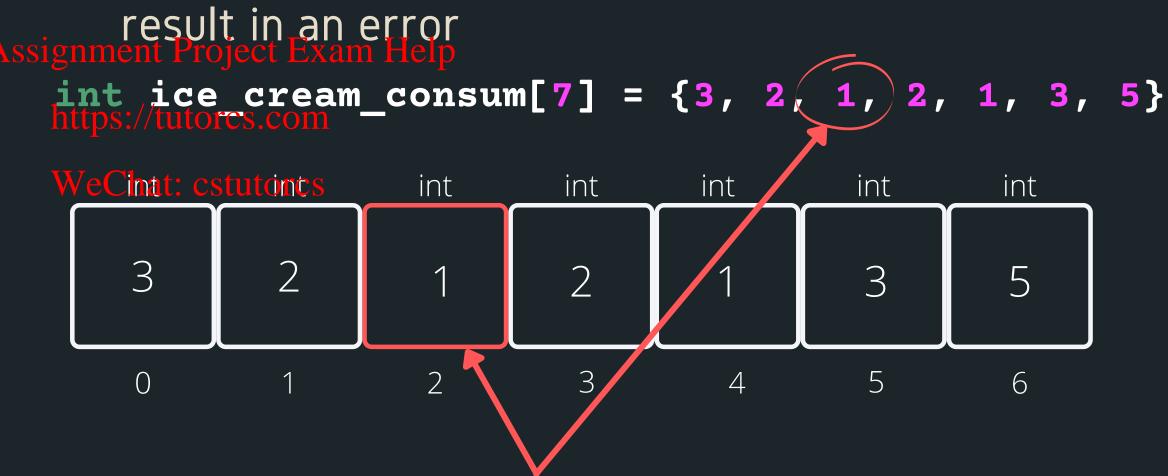

this array holds 7 integers

Note that indexing starts at 0

ARRAY (VISUALLY)

ACCESSING ARRAY ELEMENTS

- You can access any element of the array by referencing its index
- Note, that indexes start from 0
- Trying to access an index that does not exist, will

If I wanted the third element of the array

The index would be 2, so to access it: ice_cream_consum[2]

- You can't printf() a whole array, but you can print individual elements (consider how you could go through the array to print out every element...)
- You can't scanf() a whole array, i.e. a line of user input test into an array, but you can can scanf()
 Assignment Project Exam Help
 https://ndividual.elements (think how to do every element weCintantagray...)

```
int ice_cream_consum[7] = {3, 2, 1, 2, 1, 3, 5};
int i = 0;
while (i < 7){</pre>
     printf("%d ", ice cream_consum[i]);
     i++;
Assignment Project Exam Help
   Start at index 0 (first entry into while loop)
                  ice_cream_consum[0]
                print what is inside index 0
     int
                            int
                                   int
                                           int
                                                  int
             int
                    int
                                           3
                             3
                                           5
```

CLOSER LOOK

```
int i = 0;
while (i < 7){</pre>
     printf("%d ", ice cream_consum[i]);
      i++;
Assignment Project Exam Help
  WeChat: cstutorcs increase index by 1
                    ice_cream_consum[1]
                 print what is inside index 1
      int
              int
                              int
                                     int
                                              int
                                                      int
                      int
      3
              2
                                              3
                              3
                                              5
```

int ice_cream_consum[7] = {3, 2, 1, 2, 1, 3, 5};

```
